Website: https://huzaifakafeel.github.io

Analytically sharp problem-solver with hands-on experience using SQL and Python to investigate data, diagnose integration issues, and surface root causes. Worked directly with REST APIs, blockchain data pipelines, and internal analytics system. Comfortable tracing what went wrong and documenting why, and how to prevent future occurrences. Consistently translates technical findings into clear, plain-language communication for non-technical stakeholders across every role.

EXPERIENCE

2023 – Present

JPG Inc. **Remote**

Manager – *Analytics and Marketing*

- Investigated data discrepancies across reporting surfaces by writing **SQL** queries against production data, consolidating fragmented metrics into a single source of truth on **Metabase**
- Diagnosed and replaced a broken third-party data integration (Entendre) by partnering with Accounting to build an internal tool, saving **$30K/year** and restoring data reliability
- Combined data from a blockchain indexer and an internal P&L API using **Python** and **SQL** to surface user trading behaviour in order to inform and design marketing strategies
- Identified root cause of low organic engagement by mapping user flows on **Mixpanel** using custom events and discovered most trade screen visits originated from notifications rather than logins, which led to a strategic overhaul of the notifications system

2022 –2023

Zindigi | Powered by JS Bank **Islamabad, Pakistan**

Product Manager – *Digital Partnerships & Integrations*

- Diagnosed a transaction discrepancy where bus ticket charges were nearly doubled for a subset of users. Traced the root cause through logs and JSON parsing, identified the issue as iOS-only by comparing transaction data with customer complaints, and **pinpointed** a partner API response mishandled by the iOS frontend when the discount flag was true.
- Managed technical integrations with external partners across three product verticals
- Scoped requirements via **BRDs**, and wrote **CX guides** used by both internal teams and external stakeholders
- Ran **UAT** across product launches and maintained process documentation for operations, dispute resolution, and financial settlements

2021 – 2022

Airlift Technologies **Pakistan**

Regional Category & Ops Manager - *Perishables*

- Reduced **OOS** from 55% to 27% by building a structured data tracker, establishing a daily operational rhythm across 19 dark stores
- Introduced new SKU formats to grow revenue 11% while cutting waste ~40%; converted ~33% of product disposals into revenue via reverse-selling

PROJECTS

Price Intelligence Platform

Full-stack price intelligence tool that scrapes used car listings and tells car buyers whether a listing is fairly priced, a great deal, or overpriced, based on mileage-adjusted benchmarks and statistical scoring.

- Built a 4-layer **dbt** pipeline over 100K+ scraped car listings with 23 data quality tests to validate pipeline integrity at every layer
- Modelled price depreciation using linear regression with IQR-based outlier filtering; applied mileage normalisation to a 50K km baseline for fair cross-listing comparisons
- Built a **FastAPI** backend with 7 endpoints for price checking, market stats, and deal scoring
- Orchestrated the **ELT** pipeline using **Dagster** for incremental refreshes with hourly scheduling & retry policies

EDUCATION

2020 – 2021

University of Warwick | WMG **Coventry, UK**

MSc Engineering Business Management | Commonwealth Scholarship | 2:1 Degree

- Dissertation - Blockchain in Supply Chain Management: A Synthesis of Barriers and Enablers for Managers
- Published in International Journal of Mathematical, Engineering, and Management Sciences

2014 – 2018

National University of Sciences and Technology, NUST | SMME

B.E. Mechanical Engineering
