Data analyst with 5+ years of experience turning marketing and product data into decisions. At JPG, I stepped into a non-existent data role and replaced fragmented reporting across marketing, product, and finance with a single source of truth in **Metabase**. I work across the full data stack: **SQL** for analytics, **Python** for pipeline work, **dbt** for clean data models, and **Dagster** for orchestration.

EXPERIENCE

	JPG Inc.	Remote
	Manager - Analytics and Marketing	
2023 - Present	- Designed and implemented a scalable UTM tagging system across all marketing channels for JPG Store and Comet, enabling clean attribution of traffic, conversions, and campaign performance - Built a single-source-of-truth marketing dashboard on Metabase using SQL, consolidating fragmented reporting across channels, product, and finance and eliminating conflicting metrics across teams - Mapped full user flows on Mixpanel using custom events to identify audience behaviour; discovered most trade screen visits originated from push notifications rather than organic logins, which directly drove a strategic overhaul of the notifications system - Diagnosed and replaced a broken third-party blockchain revenue integration (Entendre) by partnering with Accounting to build an internal data tool, saving \$30K/year and restoring financial data reliability - Combined blockchain indexer user data with P&L data from an internal API using Python and SQL to unlock user trading behaviour insights previously invisible to the team	
	Zindigi JS Bank	Islamabad, Pakistan
	Product Manager - Digital Partnerships & Integrations	
2022 - 2023	- Worked cross-functionally with internal product, engineering, and finance teams and external partners to grow three product verticals end-to-end, scaling the ticketing product by 4x - Created a standardised reporting template replacing manual data collection, saving 20+ manhours per month; maintained process documentation across operations, dispute resolution, and financial settlements - Managed stakeholder communications across varying seniority levels, from operational leads to executive sponsors, via BRDs, CX guides, and structured requirement sessions	
	Airlift Technologies	Islamabad, Pakistan
	Category Manager / Regional Ops Manager	
2021 - 2022	- Reduced out-of-stock rate from 55% to 27% by building a structured tracking system and establishing a daily data review rhythm across 2 mothership warehouses and 19 dark stores - Analysed pricing and assortment data to introduce new SKU formats, growing revenue 11% while cutting waste ~40%; pioneered supplier-bidding strategy that reduced buying costs by 26%	

PROJECTS

	Price Intelligence Platform
	<i>Full-stack analytics engineering project that scrapes ~60k listings and tells buyers whether a listing is a great deal or overpriced using mileage-adjusted benchmarks and statistical scoring.</i>
	- Built a 4-layer dbt pipeline over scraped car listings with 23 data quality tests to validate pipeline integrity at every layer - Modelled price depreciation using linear regression with IQR-based outlier filtering; applied mileage normalisation to a 50K km baseline for fair cross-listing comparisons - Built a FastAPI backend with 7 endpoints for price checking, market stats, and deal scoring - Orchestrated the ELT pipeline using Dagster for incremental refreshes with hourly scheduling, retry policies, and exponential backoff based on rate-limit detection

EDUCATION

	University of Warwick WMG
2020 - 2021	MSc Engineering Business Management Commonwealth Scholarship 2:1 Degree - Dissertation - Blockchain in Supply Chain Management: A Synthesis of Barriers and Enablers for Managers - Published in International Journal of Mathematical, Engineering, and Management Sciences
2014 - 2018	National University of Sciences and Technology, NUST SMME B.E. Mechanical Engineering CGPA 3.45/4.00
